Read the passage on DNA

Your hair and every cell in your body contain your own unique DNA. It can tell you about your family, health and personality. DNA was discovered by a German scientist, Friedrich Miescher in 1869 but nobody realized its importance then. Other scientists thought that it was too simple to contain the map of how we are made! In 1953, a group of British scientists of Cambridge University finally discovered the structure of DNA and how it worked. They were given the Nobel Prize for Medicine in 1962. Gradually, scientists learned to read more and more of the information in DNA. In 1986, for the first time DNA test was used by the police. Some DNA is usually left by a criminal at the place where the crime was committed. This can be matched with DNA from a suspect. The test shows whether the suspect is guilty or not.
